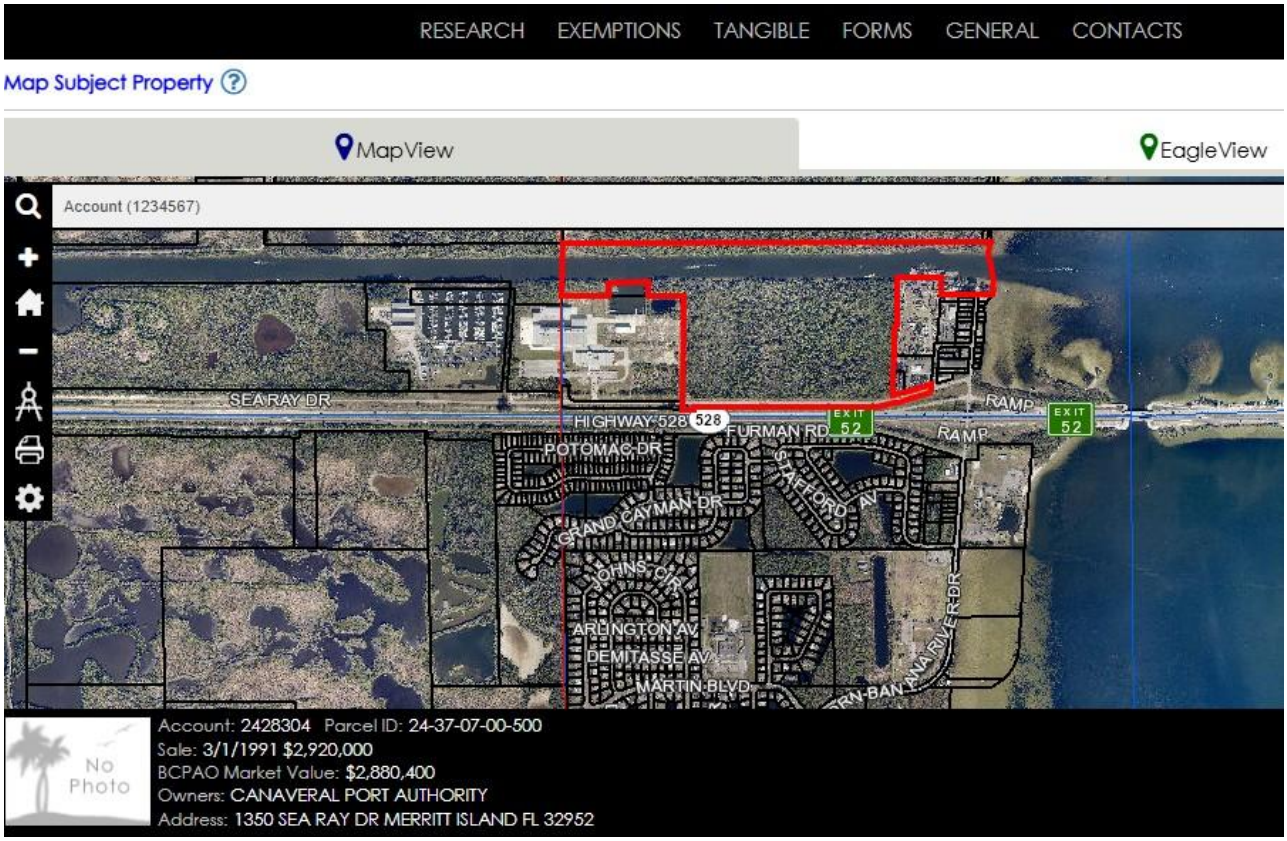
IMPORTANT NOTICE!!
LNG Plant along the Barge Canal?
Wed. January 28th, 9:00 am
Port Commissioners Meeting
445 Challenger Road, Cape Canaveral

The Port Canaveral Commission is considering selling more than 100 acres on Sea Ray Drive and Beyel Brothers Inc. property, at the top of North Banana River Drive to BHE GT&S, a Berkshire Hathaway Energy Company, and Chesapeake Utilities Corporation, to build a **Liquefied Natural Gas (LNG)** Plant to supply fuel for rockets and cruise ships, as well as gas stations. The plant will have multiple storage tanks and underground gas lines and will vent into the air. From the plant, trucks will transport the LNG for distribution on 528 and Courtenay Parkway.

This location is on the south side of the Barge Canal, next to a dense residential area, Kelly Park and Stevenson Elementary School.

There are concerns about the volatility of LNG gas in tanks and during processing and transferring, possible spills or system failures that might release into the air and water, and road infrastructure. Some additional concerns include questions about safe evacuation routes in the event of an accident at the plant, noise, homeowners insurance and property values.


Please consider attending this meeting to learn more.
Research and decide for yourself what the pros and cons of this LNG plant could be.
